

IN THE ISSUE:

- The edition has been rewarded by Memorable Diploma of Bashkiria State University
- Improvement of technology and quality of building materials is often associated with nanotechnologies and nanoparticles implementation
- The Second International Theoretical and Practical Online-Conference «Application of Nanotechnologies in Construction Industry»
- The necessary conditions for direct synthesis of foamglass materials made from natural silicates are amorphous form of raw silicon oxide and presence of nanodimensional transport porosity in it
- Due to use of nanomodifier «Unirem» asphaltic concrete pavement's durability increases by third and some of its characteristics – for example, resistance to freeze-thaw cycles – more than 10 times.
